ASSIGNMENT INSTRUCTIONS:
BOOKSTOREAPPLICATION
1.To tun my bookstore application You need to create android virtual device with nexus 5 and api 23 that is marshmallow.
2.simple click on run app button as i've shown in my output video
3.Application contains functions like adding a book, view details of books from cart, checkout function
4 At checkout when you click order it will simple return to cart and cart will get empty

CHATAPPLICATION
1.To run chat application you need to create 2 android virtual device one is charServer and one is chatClient
2.you first need to run server and then run client application
3.When both AVD will start running you need to redirect the path so both emulator can communicate to each other
4 to redirect path :> open terminal(Command prompt)
                type—> telnet localhost 5554
                        redir add ump:6666:6666
                        quit
5 now both app can communicate and you will be able to send a message from client to server
6 when server will click next button it will display in next and messages from client will append to list view one by on in order.

thank you
